Art Unit: 2124

1. This action is in response to the amendment filed on 9/4/04.

2. The objections to the specification are withdrawn in view of applicant's amendment and remarks/arguments.

- 3. The objections to claims 3-5, 7 and 8 are withdrawn in view of applicant's amendment and remarks/arguments.
- 4. The rejection under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention to claims 3 and 7 is withdrawn in view of applicant's amendment and remarks/arguments.
- 5. The rejection under 35 U.S.C. 103(a) as being unpatentable over Bapat (U.S. 5,291,583) in view of Laitinen (U.S. 5,862,383) to claims 1-8 is withdrawn in view of applicant's amendment and remarks/arguments.
- 6. Claims 4 and 8 have been cancelled.
- 7. Claims 1, 3, 5 and 7 have been amended.
- 8. Claims 1-3 and 5-7 are pending.
- 9. Claims 1-3 and 5-7 are allowed.

#### **EXAMINER'S AMENDMENT**

10. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Art Unit: 2124

Authorization for this examiner's amendment was given in a telephone interview with Werner Ulrich (Reg. No. 30,810) on January 14, 2005.

The application has been amended as follows:

# In the Claims:

1 (Currently Amended). A method of generating compiled code for producing messages in conformance with an ASN (Abstract Syntax Notation) Standard, comprising the steps of:

using a syntax analysis process, compiling an ASN input file describing [[the]] rules of said ASN Standard into an ASN Data Repository comprising a data structure of said ASN input file;

generating a file of general script lexemes using a lexical analysis of a general script source containing [[the]] rules for creating information in said ASN Data Repository, [[and]]

using a syntax analyzer, analyzing said general script lexemes to create a file of general script precompiled functions; [[and]]

using a general script Executor to act upon entries in said ASN Data Repository with said general script precompiled functions to produce [[said]] an output file; and

using an Application Programmer input file describing requirements for messages for a particular application, and said output file as inputs to a CASE tool to generate outputs for use by a Compiler compiler for a particular processor.

Art Unit: 2124

2 (Currently Amended). The method of Claim 1, further comprising the step of: compiling code for said particular processor using said output of said CASE tool in said Compiler compiler for said particular processor.

5 (Currently Amended). Apparatus for compiling code for producing messages in conformance with an ASN (Abstract Syntax Notation) Standard, comprising:

a data processing system, operative under program control for executing the following steps:

using a syntax analysis process, compiling an ASN input file, describing [[the]] rules of said ASN Standard into an ASN Data Repository comprising a data structure of said ASN input file;

generating a file of general script lexemes using a lexical analysis of a general script source containing [[the]] rules for creating information in said ASN [[data]] <u>Data</u> Repository; [[and]]

using a syntax analyzer, analyzing said general script lexemes to create a file of general script precompiled functions; [[and]]

using a general script Executor to act upon entries in said ASN Data Repository with said general script precompiled functions to produce [[said]] an output file; and

using an Application Programmer input file describing requirements for messages for a particular application, and said output file as inputs to a CASE tool to generate outputs for use by a Compiler compiler for a particular processor.

6 (Currently Amended). The apparatus of Claim 5, wherein said data processing system is further operative under program control to execute the step of:

compiling code for said particular processor using said output of said CASE tool in said Compiler compiler for said particular processor.

7 (Currently Amended). The apparatus of Claim 5, wherein said data processing system is further operative under program control for executing the [[steps]] step of compiling said ASN input file into said ASN Data Repository by executing the steps of:

generating said ASN input file through a lexical analysis of ASN source statements to generate a file of ASN lexemes; and

using a syntax analyzer to compile said ASN lexemes into said ASN Data Repository.

### - END -

## **REASONS FOR ALLOWANCE**

11. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitations, using a syntax analyzer, analyzing said general script lexemes to create a file of general script precompiled functions; using a general script Executor to act upon entries in said ASN Data Repository with said general script precompiled functions to produce an output file; and using an Application Programmer input file describing requirements for messages for a

Art Unit: 2124

particular application, and said output file as inputs to a CASE tool to generate outputs for use by a compiler for a particular processor as recited in independent claims 1 and 5.

The closest cited prior arts, Bapat (U.S. 5,291,583) and Laitinen (U.S. 5,862,383) teach a method of generating compiled code for producing messages in conformance with an ASN (Abstract Syntax Notation) Standard. However, Bapat (U.S. 5,291,583) and Laitinen (U.S. 5,862,383) fail to teach or fairly suggest using a syntax analyzer, analyzing said general script lexemes to create a file of general script precompiled functions; using a general script Executor to act upon entries in said ASN Data Repository with said general script precompiled functions to produce an output file; and using an Application Programmer input file describing requirements for messages for a particular application, and said output file as inputs to a CASE tool to generate outputs for use by a compiler for a particular processor as recited in independent claims 1 and 5; and as pointed out by the applicant's remarks/arguments on pg. 7, par. 2 to pg. 8, par. 4.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### Conclusion

12. Any inquiry concerning this communication from the examiner should be directed to Qamrun Nahar whose telephone number is (571) 272-3730. The examiner can normally be

Application/Control Number: 09/920,422

Art Unit: 2124

reached on Mondays through Thursdays from 8:30 AM to 6:00 PM. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kakali Chaki, can be reached on (571) 272-3719. The fax phone number for the organization where this application or processing is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
